SECURITY ASSESSMENT REPORT

Gobuster enumeration – Task 12

REPORT ID	AZ-WEB-2026-012
VERSION	1.0
ASSESSMENT DATE	12/9/2026
REPORT DATE	12/9/2026
PREPARED BY	Ammar Alzaiem
CLASSIFICATION	Public

Gobuster Directory Enumeration

Gobuster was used against the local DVWA application to perform directory. The purpose was to identify hidden or accessible web paths that may not be linked from the main application.

Results

Several interesting paths were identified during the scan:

- `/login` — **200 OK** — Login page was accessible.
- `/setup` — **200 OK** — DVWA setup page was accessible.
- `/robots` — **200 OK** — Robots file was discovered.
- `/docs/` — **301 Redirect** — Documentation directory was identified.
- `/config/` — **301 Redirect** — Configuration directory was identified.
- `/external/` — **301 Redirect** — External resources directory was identified.
- `/vulnerabilities/` — **301 Redirect** — Main DVWA vulnerability directory was identified.
- `/security` — **302 Redirect** to `login.php` — Authentication was required.
- `/instructions` — **302 Redirect** to `login.php` — Authentication was required.
- `/about` — **302 Redirect** to `login.php` — Authentication was required.

Manual Inspection

The most interesting results were `/setup`, `/config/`, `/docs/`, and `/vulnerabilities/`. These paths were manually inspected to determine whether they exposed useful information or application functionality.

The paths returning 302 redirects were also noted because they confirmed that the resources exist but require authentication before access.

Conclusion

The Gobuster scan successfully mapped several directories and files within DVWA. The results provided a clearer view of the application's structure and highlighted paths that could be investigated further during a security assessment.
